3. Timeline:

Most variables are available for analyses now.

1 • . Rationale:

Sociocultural variables have been found in association with clinically defined ®. Some variables, such as sokal discrepancy, have shorn inconsistent=associat across different studies, probably due.to the lack of specificity of outcome variables.

3. Main Hypothesis:

0:

Educational level and educational. discrepancy'betveen spouses, and other sociocultural factors are associated with ultra--sound defined atherosclerosis.

6_ Data (variables, time vindotil, **Source**, US cases/controls. Educational level, educational discrepancy between. spouses, residence (urban/rural), mobility (time living in). (Spouse discrepancy can.

be studied when both members Of a household have participated)_
